## Digital Transformation. All About the Customer, Not Technology

The COVID-19 pandemic has heightened several kinds of uncertainty, but one trend has become clear: it has vastly accelerated digital adoption.

All you need to do is search “digital transformation of the economy” to quickly find data demonstrating the rapid pace at which digital transformation is happening. McKinsey, the US global management consulting company, released a study showing that the rates of adoption are years ahead of the average rate, stating that “respondents are three times likelier now than before the crisis to say that at least 80% of their customer interactions are digital in nature.”

But, in spite of the myriad benefits of digital operations, the fact remains: digitizing business operations is demonstrably hard. Over 70% of digital transformations fail, according to research. Of those companies that don't fail, only 16% see actual performance improvement.

So, while more people are going full steam on digital transformation, can anyone really explain what it actually means? At a very basic level, the answer is simple: the much-used term simply means adapting an organization's strategy and structure to capture opportunities enabled by digital technology. This is not a new challenge after all, computers and software have been around for decades and have brought changes both to products and services and to how we make and deliver them. But the point I am making is that it has become increasingly difficult for a company to translate that answer into an action plan.

As sexy as it is to speculate about new technologies such as AI, robots, and the internet of things (IoT), the focus on technology can steer the conversation in a dangerous direction. Because when it comes to digital transformation, *digital* is not the answer. *Transformation* is. Technology does not provide value to a business. It never has, except for technology in products. Instead, technology's value comes from doing business differently because technology makes it possible. E-commerce is not about the internet – it's about selling differently. Analytics is not about databases and machine language algorithms – it's about understanding customers better, or optimizing maintenance processes, or helping doctors diagnose cancer more accurately. Managers often think that digital transformation is primarily about huge

new investments in technology. They might struggle to grasp what digital transformation actually means for them in terms of which opportunities to pursue and which initiatives to prioritize. Of course, technology change is involved—but smart companies realize that transformation is ultimately about better serving customer needs, whether through more-effective operations, mass customization, or new offer. For sure, change is involved, and sometimes radical replacements for manufacturing processes, distribution channels, or business models are necessary; but more often than not, transformation means incremental steps to better deliver the core value proposition. Your company shall continue to serve the same core customers even in the digital era. The challenge is to find the best way to serve those needs using digital tools.

The digital forces are clearly very revolutionary and powerful and can be frightening at times. But be assured, keep your focus on strategic transformation, not technology adoption, and you will get more powerful results. Understanding that digital transformation does not change the reason your business exists will help you identify the technologies you should focus on, without ending up running in a thousand directions.

*Infodent International* spends its time and resources using and studying some of the greatest innovations and trends. I would personally never tell a company to avoid new technologies, and to ignore fast-emerging digital innovations. But I will continue to warn managers when I see a digital transformation conversation going in the wrong direction. Technology helps you do business differently, but the right strategy incorporates the right technologies for the right jobs. It uses high tech where those capabilities are important and low tech where a simple solution can do the job. And when technology is done right, it can help a company launch wave after wave of business innovation – innovation that becomes possible as new technologies become real.

# DIA-ROOT™ BIO SEALER

Bioceramic Root Canal Sealing Material

DIA-ROOT™ BIO Sealer is a bioceramic MTA-based (Calcium Silicate-based), non-shrinking root canal sealer. It is used for the permanent obturation of root canals and suitable for all obturation techniques involving gutta-percha.

- HIGH BIOCOMPATIBILITY
- SUPERIOR SEALING ABILITY
- EXCELLENT RADIOPACITY
- LOW SOLUBILITY
- OUTSTANDING ANTIBACTERIAL ACTION

## Single Cone Technique

Complete root canal sealing without tissue irritation

Apply DIA-ROOT™ BIO SEALER by the coronal third of the canal.

Fill the root canal with selected GP cones and lightly pump the GP cones up to the root canal to fill up the Apex.

Complete root canal treatment.

## NEW Ajax AJ25 Premium Dental Package

As leading manufacturer of dental equipment, AJAX provide high-quality products & service to customers worldwide. Products cover markets with various demands, including integrated Dental Chair (basic pattern & professional disinfection/implant series), Suction Unit, Oilless Compressor, Extra Oral Suction, etc.

### A25 Dental Chair

## Geass srl

Geass is the Italian brand of innovative and high-performing dental implantology, with over 30 years of activity. Geass is present in Italy and in more than 10 countries, through selected dealers. Thanks to investments in R&D and a constant collaboration with professionals, Geass found innovative solutions, offering significant clinical advantages. Above all, Synthegra, the revolutionary laser implant surface, patented by Geass to satisfy two requirements at the same time: to reduce the risk of peri-implant infections and to promote osseointegration. Synthegra is the surface treatment applied to way implants, the implant system designed by Geass to answer all the professionals' needs, uniting surgical and restorative simplicity and freedom. The new arrival in the implant lines is **way Mix**, evolution of over a decade of way experience, which can satisfy the highest expectations of the patients in terms of esthetics. An implant characterized by an internal conical connection, platform switching, unique connection and Synthegra laser surface.

## Cotton Rolls by Richmond Dental and Medical

For 125 years, Richmond Dental and Medical has been manufacturing quality dental products. Headquartered in Charlotte, NC, we are vertically integrated with our cotton supplier.

Our made in the USA, superior quality, braided cotton rolls are the most absorbent and do not stick to the mucosa. They may be used anytime a dry field or retraction is needed. In addition, Richmond's Braided Rolls can be used during fillings, crowns, sealants (on lingual side), occlusal adjustments, and root canals. Our 4" and 6" length braided rolls may be used for whitening

and full arch reconstruction. Richmond's Wrapped Rolls wick moisture; do not stick to the tissue; and are manufactured in the USA from US grown, purified cotton. Our made in the USA, autoclavable, infection control dispensers are perfect for Richmond's 1.5" cotton rolls. Please visit our website ([www.richmond dental.net](http://www.richmond dental.net)) to learn more about our single use disposables and infection prevention dispensers.

## TrioFill

As Dentac brand, we added our T-resto composites to our product range in order to realize our dream of being a brand exporting Turkish dental products from Turkey to the world. "TrioFill", which is a micro hybrid that we first put on the market, has a universal feature. TrioFill micro hybrid composite has 77-78% volumetric fillers thanks to its micro-sized particles (0.04-0.1 micron). It was confirmed that TrioFill has easy manipulation, excellent consistency and long-term durability by dentists.

Dentac composites reveal their difference with their specially designed patented packaging in order to facilitate the use of the dentist.

- Triangular prism body that allows it to stand firmly on the table
- Lid that can be easily opened and closed with one hand
- Oval mouth that allows the composite to be taken easily with the help of a spatula.
- Test slot where you can test polymerization

SPIRIAS is A type polyvinyl siloxane-based impression material with high hydrophilicity, cured by addition curing, used for detailed impressions. SPIRIAS A type Silicone Impression Material is available in various viscosities to allow dentists to take detailed and precision impressions and to select the suitable material / technique.

**Advantages:**

- Flexible working time and fast curing option suitable for two-stage and one-stage technique
- The most accurate detail and exceptional precision
- Low contact angle and excellent wettability, high hydrophilicity
- High elasticity, excellent tensile and tear strength
- SPIRIAS impressions maintain their dimensional stability for up to two weeks.

High Tear and Tensile Strength

## Mestra microwave sintering furnace for zirconia Ref. 080114

### WORLD SCOOP

Microwave sintering furnace for zirconium prostheses

#### Advantages:

- Minimum total sintering time of only 4 hours.
- The temperature is reached more uniformly, resulting in a stronger sintered structure.
- Maintenance savings (less power, fewer components, without the fragile and expensive resistances of molybdenum silicate).
- Very low consumption (800/1100 W).
- Allows several production cycles on the same day.
- Very easy to operate.
- Much smaller than conventional ovens.
- The housing practically does not get hot.

The oven is supplied with all necessary accessories for immediate start-up.  
Height: 547 mm / Width: 440 mm / Depth: 385 mm / Weight: 31 kg / 230 V / 50 Hz / 2000 W / Max. temperature: 1550 °C

## The NEW orthodontics bracket trend by GNI ORTHO (South Korea)

GNI ORTHO is an Orthodontic manufacturing company in South Korea. We introduce the new Ceramic Passive Self-Ligating Bracket (Venus-P) has been launched. (2021/July)

### 1. Perfect full-ceramic aesthetic self-ligating bracket

The new VENUS-P is a 100% translucent ceramic self-ligating bracket presenting the exceptional aesthetic choice. Smaller body, stronger resistant, smoother edges, and rounded tie-wings provides excellent intraoral comfort for your patients. No more intraoral complaints

### 2. Patented base for optimal bonding and de-bonding

Patented double layer cross-etched base is designed to strengthen the bonding retention. Easy and clean debonding with the beveled base edges giving no-stress experience.

### 3. Innovative slide mechanism for effortless wire changes

The innovative ceramic door provides effortless but reliable door sliding mechanism aids the wire changing process. The unique pin-system prevents unwanted door opening and closing to keep wires in place.

Please, email me to get the information about our "NEW" products.

The X IMPLANT has the purpose di attack the biofilm that forms around the dental implant and determinants the "implant disease" that is Peri-implant. Peri-implant manifests with

a initial phase that is called mucositis and a more advance phase called Peri-implantitis. The bacteria that cause this pathology are the same ones that are responsible of periodontal disease. In the mucositis are involved the soft per implants part but not the peri implant bone constituent. The symptoms are manifested with the inflammation of gum tissue that determinates pain and easy bleeding.

The peri-implant represents the evolution of mucositis, the bone reabsorption determinates a perimplant bone pocket. Long to go the per-implant leads to detachment from the bone component. The current treatment is based of administration of topical/chemical drug therapy and/or topical drug therapy.

The treatment with X IMPLANT system aims to attack the biofilm that forms around the implant and implant-prosthetic structures. Referring to the study of Prof. Bill Costerton of the Biofilm Center of the University of Montana in 1994 where laboratory tests showed the

decontaminant action of an electromagnetic field on the biofilm. The "electrode" effect of the plant is exploited, with the plant itself that is crossed by a high-frequency electromagnetic wave that breaks the chemical and ionic bonds of the bacterial biofilm. This movement acts on the biofilm without damaging the peri-implant structures (soft and hard tissue).

## STERIL MAXIMUM

### Class B autoclave designed and manufactured according to EN13060

Built-in vaporizer, which generates overall energy savings thanks to more rapid cycles and consequent drastic reduction in water and energy consumption. Stainless-steel chamber. Large graphic display, a complete management and control software, make the autoclave extremely user-friendly: each single operation may be displayed in more than 10 different languages which can be selected and set up through the user menu. Built-in printer, electrical door lock and internal connection settings for water purification system. The MTS (Memory Test System) is a technical backup which has been developed to assist the user with more reliable

and faster diagnosis, reducing as a consequence the management costs. 10 different sterilization cycles and 2 test cycles ("Vacuum Test" and "Helix/Bowie&Dick Test" - page 35). It is possible to select both type-B cycles (6, with fractioned vacuum) and type-S cycles (4, with pre and post vacuum), according to the type of material to be sterilized.

## Neodiamond® #1 selling sterile single-patient-use diamond

### NEODIAMOND®

Few products come around that change the entire landscape of an industry. Since its creation thirty years ago, NeoDiamond did just that. By introducing the single-patient-use (SPU) sterile diamond to the market, it changed the dental world indefinitely. Doctors who understood the need for contamination prevention, safety, and efficiency knew where to turn and adapted their habits to this superior dental practice.

Thirty years later, people are still discovering the benefits of SPU products, and a movement is happening.

INFO02021

## Sintering furnaces e.ON sinter + & e.ON sinter base

### e.ON sinter +

- Colour touch screen 7"
- Maximum temperature 1730°C
- Operating temperature less than 1650°C
- 6 heating elements in MoSi<sub>2</sub> (Molybdenum Disilicide)
- 3 trays for sinterizing with cover and zirconia pearls (capacity till 60 units)
- 40 free programs with 40 possible stages for each program
- 4 display languages: French, English, Italian, Spanish
- External dimensions (height, width, depth): 830mm x 420mm x 600mm

### e.ON sinter base

A compact size furnace with high performances.

Made as a bench furnace, needs only a reduced location.

- Colour touch screen 7"
- Maximum temperature 1600°C
- 4 heating elements in MoSi<sub>2</sub>
- 1 tray for sinterizing with cover and zirconia pearls (capacity till 20 units)
- 40 free programs with 40 possible stages for each program
- 4 display languages: French, English, Italian, Spanish
- External dimensions (height, width, depth): 540mm x 400mm x 450mm

For any information, please contact us.

## Education Simulation - JPS Dental

JPS-FT-III is ergonomically designed to simulate the position of the dental chair in an all-round way, so that the operator can develop the correct operating gestures to smoothly transition to the clinical treatment.

One-key reset at the end of the operation greatly saves space and protects both operator and machines.

## NEW NEW NEW

### CC DIKS Peek

Discs for CAD/CAM made of extremely light, biocompatible and high-performance polymer PEEK which represents an alternative to classic metal denture bases and many other indications.

A strong and resistant material that, due to its light weight and its ability to absorb loads, presents patients a completely new comfort.

Dimension of the disc is Ø 98,5mm.

Available in dimension: 12, 14, 16, 18, 20 and 25 mm

Producer: Interdent d.o.o

## SABILEX: Microinjection machines - Cartridges - Materials - FLEXIBLE PARTIALS

Sabilex is a leading manufacturer since 1951. High quality products, new technologies and constant research are the company's main concerns for achieving excellence and reliability. SABILEX offers one of the most advanced injection systems in the market including:

### 1) Sabilex Injection Machines:

- Fully automatic
- Compact Design
- Injection temperature: up to 400°C
- Weight 12kg
- Easy programming
- CE

### 2) Sabilex Injection Materials:

6 CE certified versatile multi-property materials to elaborate dentures:

- Flexifast, PremiunFlex and Flexiultra for the making of flexible partials.

- Flexiacryl, a monomer free thermoplastic acrylic for the making of full and partial dentures. The flexibility you need. Bonds with regular acrylic.

- Flexiacetal for the making of aesthetic retainers, frameworks and more

- Biostrong - Peek thermoplastic resin for the making of frameworks, bridges, connectors and more

### 3) Vacuum sealed ready to use cartridges.

### 4) Sabilex Marketing and Training Support.

Quality marketing materials and support for Dealers, Dentists, Labs and Patients.

Sabilex exports worldwide. Interested dealers are welcomed to contact us.

## DMP presents BRIGHT flowable composites

DMP, a European manufacturer of high-quality dental materials, successfully supplies the global market for over 35 years. Certified with ISO 9001, 13485 and MDSAP, DMP's products carry the CE mark and the U.S. FDA clearance. DMP creates bright smiles achieving excellence and reliability through integrity, passion and commitment which are ingrained in DMP's culture.

DMP's BRIGHT range of flowable composites provides solutions for the dental professional even in the most demanding clinical cases. NANOCERAM-BRIGHT FLOW and BRIGHT LIGHT FLOW are characterized by their optimal physical and mechanical properties as well as the superior aesthetic results due to their chameleon effect.

With DMP's highly advanced technology and processes the benefits include:

- High thixotropy, does not drip and only flows under pressure, for precise application
- Low shrinkage with very good marginal adaptation
- High resistance to wear
- Strongly radiopaque

# SAEYANG Endo A Class (APX) & Endo E plus

Saeyang Microtech has continued to grow since its foundation in 1976 specialized in manufacturing micro-handpieces for laboratory and dental field with enjoying a good reputation from overseas more than 100 countries.

Endo A Class (APX) and Endo E plus are equipped with an apex locator. The built-in apex locator is all time on while the treatment goes on and the length from the tip of the file to the root can be easily recognized through the graph on the large LCD screen in real-time.

Endo A Class (APX), a wireless type, significantly reduces the operator's fatigue by the unlimited working range and provides incomparable visibility with intensive LED light.

## HexaTemp - 1:1 Temporary C&B Material

SPIDENT officially launches HexaTemp, bisacrylic self-curing resin, ideal for temporary crown and bridge. It is practical thanks to the compatibility of its cartridge with 1:1 dispensers and mixing tips of VPS impression material.

HexaTemp doesn't need trimming or relining. It is ideal for long-term temporaries and longer bridge spans as it has exceptional compressive strength and flexural strength with good durability. And it is suitable for long term with high fracture resistance.

HexaTemp shows high gloss, even without polishing, and fluorescence similar to natural teeth.

It is available in 4 shades: A1, A2, A3, and TW.

## X-VIEW

**X-VIEW IS** the most advanced CBCT- Cone Beam Computed Tomography- technology to acquire 2D, cephalometric and volumetric images.

Available in three models: 3D ONLY, 3D PAN and 3D PAN CEPH, this system combines the latest advances in digital radiology with a clean and compact design to offer complete and affordable imaging solutions.

### 3D

X-VIEW provides volumetric HD images (up to 65 µm), obtained in a single scan to minimize exposure to rays, with multiple FOV that allow capturing fine details of specific areas for in-depth analysis.

The FOV ranges from a minimum of 5 x 5 cm to a maximum of 11 x 11 cm.

### 2D PAN

Choose from multiple PAN options to obtain optimized, sharp and detailed 2D images of the highest quality.

### CEPH

A Cephalometric arm and a dedicated DR CMOS flat panel with single shot technology complement the structure of this unit to deliver high resolution cephalograms.

## Lares Research Handpiece Family

Lares Research introduced an ergonomic breakthrough- the world's smallest (9.9 cm) and lightest (47 g) prophylaxis handpiece, the Pastel Plus. The Pastel Plus is significantly quieter and the low pressure start minimizes splatter to optimize your infection control compliance. This innovative addition to the Lares family of handpiece products substantiates their global positioning as a dental handpiece category leader. During the 2017 ADF dental meeting in Paris, Lares Research was awarded the Most Innovative Product for the Fluoresce HD, the world's first dual wavelength LED swivel coupler enabling dentists to choose between white or 405 nm (UV) LED light output from their air turbine by depressing a small switch on the outside surface of the coupler. Fluoresce HD couplers can be connected to all Lares ProStyle SF 1 yr. warranty handpieces, Legacy 5 (5 yr. handpieces), or any Kavo MultiFlex handpieces.

## Welcome to the home of dental components!

With combined experience of over 30 years in the design of dental products, ADENSYS is uniquely positioned to deliver premium quality solutions for handpiece repair and parts. Our after-market dental rotors, which we produce in Germany for all popular handpiece models, are complemented by a wide array of accessory parts. In addition to our dental parts, we also work together with known dental manufacturers to help them bring new products to market, or to help them improve existing products.

We're here to help you perform better!

- **Quality: 90%** our products are produced in Germany and are supported by a 12-month guarantee.
- **Service:** our learnings – straight from the workbench – help us go the extra mile to ensure that you can deliver more value to your customer.
- **Innovation:** we develop new solutions to old problems, like our innovative smartphone app, "Turbine Dr".

Register at [www.adensys.net](http://www.adensys.net) (see QR-code) to receive our product catalog.

## Medifuge MF 200: a special blood separator for tissue and bone regeneration, platelets + concentrated growth factors

The Silfradent Medifuge MF200 is a dedicated medical plasma blood separator.

It is designed to prepare autologous concentrated growth factor (CGF) and CD 34 + cells using patient's own blood which is the ideal autologous source without the addition of exogenous substances. CGF represents a new generation of platelet that able to hold inside a higher concentration of autologous.

Growth factors are proteins which regulate the complex processes of wound healing and enhance the body's healing abilities without side-effects. The Medifuge prepares up to 8 test tubes of various levels of concentrate with active proteins in liquified or Fibrin form to create membranes, glue or other

particulars for tissue regeneration and bone augmentation in a short period of 12 minutes. These features, together with the simple and standardized centrifugation protocol MEDIFUGE, make the CGF a superior autologous product which can be used in different areas of regenerative surgery; for example in dentistry, maxillofacial surgery, cosmetic surgery and orthopaedics.

## Sintering furnaces UGIN DENTAIRE: e.ON sinter + & e.ON sinter base

e.ON sinter + is equipped with the latest technical evolutions, a colour touch screen, 40 free programs including 40 stages in each one (huge set-up possibilities). The high temperature muffle is equipped with 6 heating elements to reach operating temperature till 1.650°C, to sintering all types of zirconia (high translucency multilayers, preshaded) for excellent aesthetics results. Performance, efficiency and reliability are its main characteristics. e.ON sinter base is a

compact size furnace able of high performances, equipped with 4 heating elements to reach a temperature of 1.600°C with one tray and a capacity around 15 units. This furnace is perfect to start in zirconia sintering, for small lab, or to complete a lab equipment.

## TRAYDEX 45 LED Light Curing Machine

This production is light-curing machine for dental laboratory use. It contains 16 levels of light intensity adjustment, 10 stages of duty cycle (flash cycle) and 5 secs to 995 secs time control.

Four Advantages:

1. SAVE TIME: Fast Curing- High power LEDs, broadband LEDs, save fabrication time.
2. SAVE COST: Stable Light Volume- High power LEDs with constant current circuit; there's no need to change UV fluorescent light tube.
3. EASY TO USE: Memory Setting- Multi-memory setting function; it's easy to recall the habitual settings.
4. Post-Curing for 3D printed: High power UVA LEDs is included, which results in a quick and uniform curing cycle.

Cabin entirely made of ABS of reduced dimensions maintaining the amplitude in the work area and with a substantial improvement in lighting. They have two mobile micro-blasting nozzles and, in the hopper version, a large sand tank and a 3 mm static gun.

Ref.	080220	080228
Height	330 mm	490 mm
Length	360 mm	360 mm
Width	450 mm	450 mm
Weight	5,7 kg	7,7 kg
Maximum air consumption	80 l/min.	100 l/min.
Operating pressure	2 a 5 atm.	2 a 5 atm.
Interior light LED		

Entirely built in technical plastic, high strength material, easy cleaning and no oxidation. It allows to locate it in any corner of the laboratory. Tank capacity up to 8 kg of sand. Skeletals are placed in a basket that turns by the action of a motor. The blow nozzle is adjustable in the three dimensions of the space, so that the ideal angle of attack is always achieved. The basket can be easily decoupled from the motor shaft, which simplifying the preparation of the work.

Height	430 mm
Width	320 mm
Depth	310 mm
Weight	5,5 kg
Maximum air consumption	90 l/min.
Operating pressure	2 a 5 atm.
LED inside light	

## Orión Work box Ref. 080214

## Review booth Eclipse Ref. 080216

Height	300 mm
Length	360 mm
Width	330 mm
Weight	2,6 kg
Interior light	

- 1) Remove elbow tube (rear outlet)
- 2) Shipyard tube placement.

Docking coupling with Job type suction

The suction hood is strategically located so that it doesn't obstruct. The hood is connected to an external suction tube at the rear through a pivotable outlet. Furthermore, detachable boxes collect the dust that could fall through the hand rests.

### Common elements in the 2 models:

- High luminosity LED lamp.
- Absence of shadows inside.
- Ergonomic work position.
- Optimal absorption of powder by means of external suction (not included).
- Easy cleaning.

Height	275 mm
Length	360 mm
Width	330 mm
Weight	2,8 kg

## 1200+ parts for handpiece repair and only one supplier

We produce and distribute parts for handpiece repair in more than 50 countries around the world.

Our products are suitable for world's best known dental brands and we cover the majority of models. We are developing innovative technical solutions and always looking for an improvement in our parts. We support our clients with technical information and repair tips.

Wide range of spare parts:

1. Turbine rotors, push buttons, keys
2. High & low speed bearings
3. Micromotor parts
4. Contra angle rotor and gears
5. Bulbs and fibre optics
6. Hoses, suction tubes, syringes
7. Repair tools
8. Washers & O-rings

Receive our brand new catalog on 250 pages.

## Premium Ozone Oral Irrigator for More Effective Oral Cleaning

Right now, we have a new type of oral irrigator with ozone function. It converts tap water into ozone, which effectively cleans bacteria in the mouth. The patented ozone generator can convert the H<sub>2</sub>O to O<sub>3</sub> water by changing its molecule structure.

The new technology is an easier and more advanced way to safeguard your oral health. It has been clinically proven to kill most common bacteria quickly. From portable to tabletop products to meet your different needs, just one button, making your life better.

Each one is simple to use and has several pressure ratings for your choice.

We can also offer customized service if you want to add other accessories or promote your own brand.

## SONOSURGERY® AIR SURGICAL UNIT

With the new AIR SURGICAL UNIT it is now possible to easily drive and control a SONOSURGERY® AIR POWER sonic handpiece.

The unit is completely pneumatic and is equipped with a special pressure bag for liquid irrigation, which is automatically and continuously inflated at low pressure.

Both liquid flow and handpiece air pressure supply can be easily adjusted by specific commands on the front panel. A special foot pedal allows to activate the handpiece vibrations and the flow of sterile liquid simultaneously, so as to free the hands of the surgeon.

The unit is also provided with a detachable 4-hole silicone hose.

The unit, in combination with the SONOSURGERY® handpiece and a range of specific sonic inserts, is suitable for general oral surgery: bone block harvesting, cyst excision, preparation of implant sites, extractions of impacted teeth, maxillary sinus lift by crestal or lateral access, corticotomy, osteotomy and osteoplasty, etc...

# TCS Thermoplastic Resins & Equipment

## BPA/Metal Free Flexible Partial & Full Dentures

TCS, Inc. is a dental manufacturing company dedicated to providing dental laboratories with exceptional quality materials and equipment that are accessible and reliable.

Forming strong partnerships is at the core of TCS brand, because for TCS, manufacturing is more than just a business, it is a collectivist culture.

With three resilient, high performing resins to choose from; Unbreakable™ (nylon), iFlex™ (polyolefin), and Karadent™ (microcrystalline polymer), TCS meets any removable department's needs allowing for the most reliable, functional, and uncompromising aesthetic restorations for patients with missing teeth.

### TCS Resins:

- Unbreakable™ (nylon based) & iFlex™ (polyolefin based)- Ideal for Flexible Partial & Full Dentures. Available in 4 pink shades and natural.
  - Karadent™ (microcrystalline polymer)- Ideal for full dentures, clear clasps, & frameworks. Karadent™ combines the strength of nylons with the simplicity of acrylics. Available in Standard Pink & Crystal Clear.
- Additionally, TCS offers a variety of injection units and accessories for every size lab and budget.

### Packaging:

Lasered and vacuum sealed cartridges include patient care instructions and delivery bag. All TCS products are proudly made in-house in the USA.

## DiaDent® D-LUX+

D-LUX+ is a high performance dual-wavelength Cordless LED Curing Light. Built and designed with the highest quality and durability, its dual-wavelength can efficiently, effectively and uniformly polymerize all light-cured dental materials.

At its maximum light intensity output of 2,400mW/cm<sup>2</sup>, it can complete all restorations safely and efficiently.

### Benefits

- A high intensity output of 2,400mW/cm<sup>2</sup> and 10W LED offers short curing time and efficient polymerization
- 360° swivel light probe and silicone ring tip ensure patient comfort

- Dual-wavelength with 4 LED lamps can efficiently polymerize all dental materials
- Broadband spectrum of 385nm-515nm
- Wireless battery charging system eliminates any potential charging contract problems
- Five(5) versatile curing modes allow flexible curing time and power intensity including 1 second curing and Orthodontic curing mode
- Built-in Light Intensity Measurement Sensor provides peace of mind so clinicians can always verify if the intensity is within normal range

## EndoM & EndoR

EndoM and EndoR are B&L's newest products and are used to hold files and measure the length of the instruments during endodontic procedures. These products are different from the current ones in the market because they have magnets for customization in orientation. EndoM's wrist design is useful to customize different dentists' wrist size.

## Baolai develops waterless ultrasonic scaler for home use

Nanning Baolai Medical Instrument Co., Ltd was established in 2009, to mainly develop technological products for the worldwide dental equipment market. Baolai has ISO13485, CE, FDA certifications and 37 patents, and is one of only two Chinese scaler manufacturers having all these certifications. All products must pass a durability test for 2,000 hours use and are inspected for quality 3 times before leaving factory. Baolai was the first manufacturer, in the world, to launch an aluminium alloy scaler handpiece. Solving the traditional scaler handpiece problems such as cracking and yellowing caused by the disinfection process. It was granted 15 national patents for this innovation. Baolai has developed not only piezo ultrasonic scaler, led curing light, periodontal treatment device, extraoral aerosol suction system, etc. for dentists use, but also waterless ultrasonic scaler for home use. All products are highly regarded by dentists and individual users from 112 countries and regions of the world.

**Stop to wasting time & stop the hesitancy choosing composite shade.  
Any more, with only one syringe, all shade teeth will be restored.**

Zenchroma is a light curing, hybrid composite containing an ultrafine, radiopaque glass filler and is indicated for placing fillings using adhesive techniques. It can be polished to a high lustre.

Due to the ultrafine particle filler, extremely homogeneous restorations can be placed which are easily polished to a high lustre. The chameleon effect matches the shade of the filling perfectly to the tooth structure. The guidelines of EN ISO 4049 have been complied with. Zenchroma is available in syringes and compules.

The compules are for single use. Please do not reuse them, as this makes it impossible to rule out contamination and germ formation.

**Indications**

- Direct anterior and posterior restorations in Black's classes I, II, III, IV, and V cavities.
- Inlays, onlays and laminate veneers
- Extended fissure sealing in molars and premolars
- Splinting loose teeth

Editorial Director

[silvia.borriello@infodent.com](mailto:silvia.borriello@infodent.com)

*Italy's struggles to keep its population healthy with new treatments and care, while balancing its books, embody the challenges facing much of the rest of Europe. But the country's broader financial crisis has hit the health sector in some ways more than its peers: while health spending in rich countries recovered after the financial crisis, it has contracted in Italy for several years, resulting in finance cuts, privatization, and deprivation of human and technical resources. But the EU recovery plan could be a chance to play right; many are the expectations, both of healthcare personnel and citizens, who are hoping for a real revolution, in the near future, both in terms of primary and local care as well as in digitalization, and in the entire health system.*

# EU Recovery Fund to Reshape the

# Italian Healthcare System

	Italy	EU
GDP per capita (EUR PPP)	28 900	30 000
Relative poverty rate (%)	20.3	16.8
Unemployment rate (%)	11.2	7.6
Median age	45.9	43.7
Share of population over age 65 (%)	22.3	19.4
Fertility rate	1.3	1.6
Health spending per capita, 2017	EUR 2483	EUR 2884

With a population of almost 61 million, Italy is the sixth most populous country in Europe. The country is made up of 20 regions, extremely varied, differing in size, population, and levels of economic development. The regions are subdivided into provinces, which are made up of municipalities (*comuni*). Italy has about 8,100 municipalities, which range in size from small villages to large cities such as Rome.

**The majority of the Italian population has a high standard of living and quality of life resulting, in part, from well-established health policies and welfare measures.**

Life expectancy of Italians is among the highest in the world and second highest in Europe, after Spain, currently standing at 83.1 years for women and 79.9 years for men. In contrast, its fertility rate is one of the lowest in the world: 1.3 births per woman, far below the replacement level of 2.1, and immigration is the source of most of this growth. Estimates of avoidable mortality and care for chronic conditions compares well at an international level, although healthcare outcomes are inequitable across regions, genders, and socioeconomic groups.

**The Italian National Health Service (NHS) was established in 1978 to grant universal**

**Life expectancy of Italians is among the highest in the world and second highest in Europe, after Spain, currently standing at 83.1 years for women and 79.9 years for men.**

**access to a uniform level of care throughout Italy. In spite of this, there are considerable variations in coverage and service quality mainly, but not exclusively, between the richer and better covered regions of the north and the poorer ones in the south.**

The gaps between northern and southern regions mainly reflect socioeconomic and cultural factors that are far beyond the healthcare system. A strong role for central government to equalize the starting conditions between regions may be required, but regional fragmentation leaves the Italian government with weak strategic leadership. This pattern is also substantially echoed in the geographical distribution of satisfaction levels with the healthcare system and its performance. Generally, however, over the last few years there has been a general decrease in satisfaction levels.

**Regionalization** - The Italian Health Service makes the right to health accessible to all citizens, without discrimination based on income, gender, or age. **Since the early 1990s, considerable powers, particularly in healthcare financing and delivery, have been devolved to the regional level of government. Italy's healthcare system is a regionally based national health service that provides universal coverage largely free of charge at the point of delivery.** The system is organized into three levels: national, regional, and local. At national level, the Ministry of Health sets the fundamental principles and goals of the National Health System (*Servizio Sanitario Nazionale* -SSN), determines the core benefit package of health services guaranteed across the country, and allocates national funds to the regions. The regions, in full autonomy, plan

and manage healthcare in the area, while the local health authorities (ASL – *Aziende Sanitarie locali*) provide the services.

The different regions have made different choices on how to use their increasing autonomy, with different organizational and funding models, resulting in great diversity. **Thus, a large vertical fragmentation exists in the extent and the quality of such strategies between regions or ASLs of excellence, which are mainly found in the center-northern part of the country, and areas where self-directed initiatives are scant.** The uncontrolled increase of regional healthcare spending since 2001 and the international financial and economic crisis that began in 2008 have led policymakers to reconsider full fiscal decentralization to regions. In fact, despite the country's federal structure, most regions cannot fund healthcare with their own resources, relying on the national transfers to compensate for the differences in regional incomes. The resulting financing system has an unevenly distributed tax base, and a need for poorer regions to increase tax rates more than high-income regions, with consequent disincentives for business location, for example. In recent years there have been attempts to place stricter controls over regions' health spending after a few incurred considerable deficits. Moreover, tighter cost-containment measures on public health expenditure have been proposed and are being slowly implemented (e.g., caps on specific spending areas). **At the same time, higher and more extensive co-payments for outpatient (ambulatory care), diagnostics and drugs have been introduced by the regions, from late 2011, increasing the amount of additional private spending for services provided by the NHS.**

**Coverage and provision of services** – Healthcare in Italy is provided to anyone in a mixed Public and Private system. **The State, through the National Health Plan, establishes the Essential Health Services, so-called LEA (*Livelli Essenziali di Assistenza*), that must be guaranteed throughout the country, to all residents (including immigrants, documented or not), free or with cost sharing, using the resources collected through general taxation.** Immunization and screening programs are considered to be priorities. Healthcare services (i.e., the LEA) provided within the NHS are identified by positive and negative lists using criteria related to medical necessity, effectiveness, human dignity, appropriateness, and efficiency in delivery. Primary

and inpatient care are totally free at the point of use for everyone. So, consultations with public primary general practitioner (GP) and pediatricians are free. They also have a gatekeeping role as they are responsible for prescribing medication and, after diagnosing a health problem, referring patients to specialist consultations or further levels of care if needed (except for dental care, obstetric and gynecological services, and pediatric care, which are services that can be directly accessed). Hospital admission is free if admitted for necessary procedures but would not be free for elective procedures (for example a preventive check-up). Only some specialist consultations, lab analyses, and diagnostic procedures are free and only if prescribed by the public primary GP/pediatrician, most services demand a cost-sharing, and many are provided at the patient's full expense, although fees are usually quite reasonable. Some medicines are also free (usually the ones related to serious illness or life-threatening conditions) while others are discounted with a prescription from the public primary GP. Negative lists include ineffective services; services that are covered only on a case-by-case basis, such as orthodontics and laser eye surgery; and inpatient services for which ordinary hospital admissions are likely to be potentially inappropriate (e.g., cataract

surgery and carpal tunnel release).

Specialized outpatient care experiences long waiting lists – a common phenomenon in Italy that is often related to unsatisfactory quality of care. Overall, however, given the existence of such waiting lists, people often seek care within the private sector and significant inter-regional mobility of patients takes place, especially from southern to northern regions in order to access care faster.

**Increasing role of the private sector** – The NHS is largely funded through national and regional taxes, supplemented by co-payments (ticket) for pharmaceuticals and outpatient care. **Given the containment measure adopted by the Italian government over the past years, according to OECD data, in 2019, total health expenditure accounted for 8.7% of GDP (from 9.2% in 2012), well below the EU average of 9.6%; to make a comparison, France and Germany employ more than 11% of their GDP.**

The private sector is having an increasing role in public health. In 2018, total health expenditure amounted to 154.8 billion euros, of these, public sources made up 74.2% of total healthcare spending (down from 78.2% in 2012), and private

The gaps between northern and southern regions mainly reflect socioeconomic and cultural factors that are far beyond the healthcare system.

spending 23.1% (up from 21.8% in 2012), mainly in the form of out-of-pocket (OOP) payments (23.5%, among Europe's highest rates) - these OOP payments are mainly for diagnostic procedures (laboratory tests and imaging), pharmaceuticals, specialists visits (including dental services) - putting a further burden on Italian families, where, on average, each Italian spends 612 euros per year. Only about 2.7% of total healthcare expenditure is funded by insurance funds. **For specialist (outpatient) visits, the most recent estimate using the national ISTAT survey reports that 56.8% of total specialist visits are paid fully by patients, 27.8% applied a co-payment and the remaining 15% were free of charge. Dentist and gynecology outpatient visits are the most common privately paid visits outside the NHS.**

Only a few private hospitals in Italy are not accredited by the NHS and thus work only with private patients. To be accredited, private providers must meet safety and quality standards. **According to the Italian Private Hospital Association, of the 520 private health facilities they represent, 93% (490) are accredited (Privato convenzionato) with the NHS, for a total of 52,000 beds.** One million people are hospitalized in these institutions every year. Costs are incurred by the NHS and citizen using private accredited providers do not incur any additional expenses compared to public providers.

## Moreover, as an incentive to increase private sector utilization, and to help families bear the burden of co-payments, private health expenditure is eligible for tax credit, also in the attempt to lighten the burden on the NHS and to better assist those who cannot afford to go elsewhere.

Healthcare services that are not covered by the NHS may be offered, privately, either by public or private facilities. In a public facility, services outside NHS coverage can be offered within the *intra-moenia* framework i.e., where NHS professionals, mainly specialists, can also offer their services to privately paying patients within NHS facilities as part of their (part-time) private practice.

**It is not possible to opt out of the public system, thus full substitutive voluntary health insurance (VHI) does not exist.** With over 11 million Italians with VHI, it is steadily increasing and estimated to reach 21 million by 2025. Concentrated among higher socio-economic groups, those taking it up mainly do so for faster access to services, to choose a doctor and get reimbursements even for services not covered by the NHS, such as dentist (although partially), glasses, or a single room in the event of hospitalization. Moreover,

as an incentive to increase private sector utilization, and to help families bear the burden of co-payments, private health expenditure is eligible for tax credit, also in the attempt to lighten the burden on the NHS and to better assist those who cannot afford to go elsewhere. With over 60 days national average waiting time to access NHS facilities, many people often resort to specialist visits in private settings. On this regard, healthcare federalism has favored increasingly marked territorial inequalities. In some regions, for example, the average waiting time for some diagnostic tests and specialist consultations is over 7.5 months.

**Healthcare infrastructures and Human resources** - Due to policies aimed at controlling health expenditure, increasing hospital efficiency, and reducing waste, there has been a consistent reduction in hospital bed numbers, further imple-

### OOP PAYMENTS MAKE UP A HIGHER PROPORTION OF HEALTH SPENDING THAN THE EU AVERAGE

Note: OOP payments for dental care in Italy are included in outpatient medical care.

<b>Italy</b>	<b>2.3%</b>
Germany	1.7%
France	1.9%
Spain	2.6%
Portugal	3.1%

mented by a reduction in the number of healthcare facilities, particularly via the closure of small hospitals or the transformation of acute care facilities into other types of services to meet changing needs (for chronic diseases, ambulatory care or care for the frail and elderly). Italy has a disproportionately high number of small hospitals. The median size of Italian hospitals is one-third less than that of Germany, France, and Austria, and around half that of UK hospitals. This could be due to small hospitals compensating for poor community health services such as home care and long-term care, especially in non-urban areas. Italy has 3.4 hospital beds per 1000 people; 80%

dedicated to acute care (higher than the EU average of 69%) and a bed occupancy rate that has been increasing steadily and is higher than the EU average. The NHS counts on about 191,000 beds for ordinary hospital admissions, 23.3% in accredited private facilities. In 2017, one thousand medical institutions provided hospital care, 51.8% public (dropping from 54% in 2010) and 48.2% private accredited (rising from 46% in 2010).

**In general, doctors employed by the National Health Service are salaried and have civil servant status, although general practitioners (GPs) and pediatricians (primary care level) are self-employed and independent professionals, running solo practices, although national contracts and regional agreements encourage group practices by offering supplements to capitation, extra resources for the practice, including nursing and staff support.**

The average level of medical care is quite high compared to international standards and Italian doctors are usually highly qualified. With 3.9 practicing doctors per 1000 people, Italy is above the EU average of 3.6 – though, conversely, the number of nurses (not including midwives) is relatively low, at 5.7 per 1000 people, and the ratio of nurses to doctors (roughly 1:1) is among the lowest in the EU – the

average is 2.5 nurses to every doctor.

Italy is predominantly a destination country as far as worker mobility, with low reliance on foreign medical doctors – less than 5%, when compared to UK, Ireland, and Switzerland (ranging between 22.5% and 36.8%) - with higher levels of inflows for nurses and care assistants (*badanti*), both legal and illegal, for the elderly care and home-care sectors, who are mainly undocumented workers working in the grey economy. The demand for informal care assistants is estimated to be three times higher than the demand for nurses.

The median size of Italian hospitals is one-third less than that of Germany, France, and Austria, and around half that of UK hospitals.

**EU Recovery Fund** - Amid increasing political instability and faced with the current economic constraints, the largest challenge facing the Italian health system is to achieve budgetary goals without reducing the provision of health services to patients. As matter of facts over the period 2010-2019, the NHS suffered financial cuts of more than €37 billion and a progressive privatization of healthcare services, resulting in a public health system under much pressure. **In the years, government interventions in the NHS have taken the form of either urgent decrees or entries in the annual state budget law, rather than systematic reforms, and have mostly consisted of cuts to public expenditure.**

The Covid-19 pandemic is putting a further burden on the already strained health system but, unexpectedly, it is also shedding a light. The National Investment Program, that Italy is presenting to the European Commission as part of the Next generation EU plan to get out of the pandemic, allocates a total of 20.2 billion euro to strengthen and innovate public health. **A unique opportunity that, if managed well, will reshape the Italian NHS. Primary care and community services are cornerstones of the recovery plan for health, together with technological modernization and the digitalization of the entire health system.** Of these, 9 billion euros are intended to strengthen homecare and the local health network, together with development of telemedicine and more effective integration with social services. The Ministry of Health is betting on two organizational models that have already been tested in the past but have never really taken off, namely, community houses, and community hospitals. In community houses, citizens will find all basic social and health services offered by the NHS, provided by a multidisciplinary team made up of

family doctors, pediatricians, medical specialists, community nurses and social workers. **The scope is to have the over 53,000 GPs operate in a more structured system, together with specialized personnel and technologies to ensure the most effective treatments and the best assistance to patients' needs, abandoning the logic of solo or associated GPs practices.** Community hospitals are intermediate level between home and hospital care, structures for short-term hospitalization of fragile but not serious patients who basically need nursing care, to avoid improper hospitalizations. **The goal is to completely abandon the hospital-centered logic, which generates diagnostic waste, wards overloaded with non-complex cases, at the same time diverting energy and resources for local care and assistance.**

## FOCUS

**Author: Silvia Borriello**

Editorial Director

[silvia.borriello@infodent.com](mailto:silvia.borriello@infodent.com)

*Lack of relevant policies with a public health focus, absence of systematic oral health surveillance and limited access to care for large population groups are strong indicators that oral health is not a political priority. However, opportunities in the wider political environment could be used to facilitate analysis, discussion and change in order to improve political priority of oral health in Italy.*

# Italian Oral Health

## Still Too Low on National Agenda

Oral health remains a neglected area and its political priority on most national agendas, including Italy, is low. As in most other Mediterranean European countries, in Italy oral healthcare is mainly provided under private arrangements, with very little public provision of dental care, and limited National Health System resources allocated to reimbursable services. **The public healthcare system provides only 5-8% of oral healthcare services completely free of charge, with the remainder purchased privately, out-of-pocket, by patients. This percentage varies from region to region. Oral healthcare is included in the Legislation on Essential Levels of Care (LEAs) for specific populations such as children, vulnerable people (medically compromised and those on low income) and individuals who need oral healthcare in some ur-**

Apart from the national benefits package, regions may also carry out their own initiatives autonomously, but must finance these themselves, making access to oral healthcare not homogeneous across the country.

Active dentists (2018, Istat)	49,552
Active dental offices (est.)	41,000
Dentist (active) per 1,000 population (2018, Istat)	0.82
Total oral health services expenditure (2019, Istat)	7.7 billion euro
% population visiting a dentist on average annual basis	37.9%

**TREND FOR TOTAL ORAL HEALTH EXPENDITURE FOR DENTAL SERVICES**

Source: Istat. Note: total expenditure does not include prosthetics expenditure and intermediary expenditure (such as insurance or other third-party payments)

**gent/emergency cases. For other people, oral healthcare is generally not covered.**

The minimum set of services included in the benefit package are preventive and diagnostic services, treatments for caries and associated complications, periodontal diseases, dental occlusion and dental bone-related complications and emergencies. Orthodontics and dental prostheses are generally not covered (limited care is available to special groups of patients, defined according to age and specific clinical conditions). In order to access these services, co-payments are necessary, with exceptions granted to children aged 0-14 and vulnerable groups, although the availability of, and waiting times for, public and accredited health services vary across regions and areas of care.

Apart from the national benefits package, regions may also carry out their own initiatives autonomously, but must finance these themselves, making access to oral healthcare not homogeneous across the country. In Southern Italy (Istat data) only 27.7% of the population aged 3 and over resorts to dental treatment compared to the national average of 37.9%. Also, as far as number of visits for prevention in the South, the percentage of people making them is almost half (16.1%) of that of the North (30.7%), while the number of those who have never been to a dentist is double: 12.1% against 6.2%. A paradox is the increasing trend in the use of public or subsidized dental facilities within the country except for southern Italy, which has gone down from 4.4% to 4.1%.

There is no clear mandate for leadership or coordination within the oral health sector, resulting in fragmentation and in dominance of the pri-

vate sector. As a consequence, oral diseases are mainly addressed through a curative rather than a preventive public health approach. Current, systematic, and representative data are lacking. Therefore, the real burden of oral diseases is unknown and thus cannot be addressed adequately. **Evidence-based, cost-effective, and sustainable population-wide public dental health interventions are not implemented on a large scale, and growing inequities in terms of access to care are not seen as a concern.** Yet, back in 2015 the Italian National Institute of Statistics (ISTAT) positioned the dentist in the first place in the basket of needs for the Italian population.

Oral health care is provided mainly by private dentists and dental hygienists, organized in self-owned and small-size practices (75% of dental practices), mostly made up of professionals with an average age of 53 years, or bigger organizations involving different specialists, laboratories, and technicians. According to Istat data(2018), there are 49,552 practicing dentists (59,324 including non-active dentists) with a ratio of around one dentist every 1,025 inhabitants, and about 7,854 dental hygienists. According to the National Association of Dental Laboratory Owners (ANTLO), there were 11,933 laboratories in 2017, down from 15,165 ten years before. Such reduction has mainly involved small individual laboratories which were 8,288 in 2017 (11,044 in 2007). In Italy, 44% of labs are made up of just one technician, 31% two technicians while only 25% have 2 or more technicians. Only dental laboratories in joint stock companies have almost doubled their number in ten years, 420 in 2017 against 264 in 2007.

To enroll in an Italian dental school a student must pass a competitive national entrance examination after obtaining a high school leaving certificate. In comparison with dental schools in other EU member states, the number of dental students per school is low with an average of 20 students per year. In line with the trend is also a declining demand for dental services by the Italian population, with 0.5 visits per capita (less than 1 visit per person), and consequent total expenditure on dental services, which amounted to 7.7 billion in 2019, down from 8.5 billion in 2018. Economic reasons account for 85.2% on the total of those who have deferred dental visits, maybe for many of those treatments that do not have to do with emergency or pain. Furthermore, in spite of an increase in oral care needs among the elderly, the percentage of visits to the dentists

**ORAL HEALTH STATUS**

	2005	2013
% population with 28 natural teeth	37.8	41.4%
edentulous patients	12%	10.8%

decreases with increasing age, with 36.1% of over 65 years old visiting a dentist against only 29.2% over 75 years. Despite all, the oral health of the total population has improved in the years.

According to data published by the Italian Dental Industry Association (UNIDI), the estimated turnover in 2018 was around 992 million euros worth of dental production, 61% of which was exported. Also, total dental market size (sell-out value) was worth approximately 1,339 million Euros, 62% of which made up of imported products. With a +5.2% average 2009-2018 compound annual growth rate (CAGR), the Italian dental industry demonstrates reliability and solidity. After significant declines in turnover in 2020, due to the Covid-pandemic, the market should start reviving in 2021.

**Finally, according to an ISTAT report in October 2017, 11.7% of patients 15 years and older used the public service, 86.9% turned to the private sector but over 80% of expenses are out-of-pocket.** Maybe the time has come for dentistry to be included in the national agenda, considering the correlation between oral diseases and systemic diseases has been widely proven. A better focus and more investments on prevention is a must within Italian dentistry as ISTAT calculates that on the one hand the percent-

age of those who take care of their teeth decreases, today there are about 37 Italians every 100 (i.e., 63 Italians give up dental care) and on the other side there are those who still go to the dentist but less frequently. Prevention is cheaper than cure!

# A Necessary Effort to Leave an Always Smaller Carbon Footprint

**Author: Luca Maria Pipitone**

Degree in Biotechnology

[luca.pipitone@infodent.com](mailto:luca.pipitone@infodent.com)

**In the United Kingdom, primary dental services emit 676 tons of CO<sub>2</sub> into the atmosphere per year, approximately 3% of total carbon footprints emitted by the British Health System services, and equivalent to 50,000 flights from the United Kingdom to Hong Kong.**

Gradually rising temperatures, melting glaciers and drastically changing ecosystems are clear signs of a planet changing its attitude. Not that the Earth has a conscience, responding to a wrong it is suffering from but, as a closed system, it reacts to any large-scale imbalance, regardless of who triggers it. Today, thanks to the work of scientists and the media, we know a lot about global warming: the factors triggering it, the consequences on everyone's life but, most of all, we know a lot about the strategies to

adopt to slow down this metaphorical snowball that has become heavier and faster over time. On a scientific level, the solution is rather simple: to basically reduce emissions of greenhouse gases. On the social level however, there could not be more of a complex solution.

Virtually every existing action, process or activity generates carbon dioxide, from humans breathing to food production, passing through any form of transportation of goods and people. This is precisely the problem. Carbon dioxide emissions are so intrinsically connected to the planet social fabric to be considered as clear evidence of the intense process of evolution that human civilization has undergone in recent centuries. Such fast growth required incredibly large amounts of energy that only fossil sources could satisfy, but that inevitably returned-back into the planetary ecosystem in the form of carbon dioxide. Nonetheless, in an historical period of awareness and change such as the one we are observing today, it is unthinkable to remain anchored to an outdated concept of development, it is instead necessary to rework and update all technological processes in a cleaner and more intelligent perspective.

In this regard, following the *Climate Change Act*, the British National Health System (NHS) is legally obliged to reduce its CO<sub>2</sub> emissions by 80%, by 2050, compared to 1990 levels. This gradual de-carbonization plan would involve a 34% cut in carbon dioxide emissions by 2020,

# AT A GLANCE

## The German Dental Industry Looks Ahead to the Coming year with Confidence

IDS 2021 will continue to revive the market situation after significant declines in turnover in 2020.

*Cologne, Germany, 20 May 2021* - At the European press conference in preparation for the 39<sup>th</sup> IDS Chairman Mark Stephen Pace still remained confident about the future economic position given the significant declines in turnover in the 2020 financial year.

The **Treuhand survey of the Association from the beginning of 2021** produced the following result.

In 2020 the VDDI member companies again earned a total turnover of fewer than five billion euros (4.82 billion euros) for the first time since 2015. It was thus 13.1 percent below the 2019 result. Almost 2.92 billion euros of that was earned on export markets, a decline of 16.5 percent. "The Companies have made great efforts to ensure that declines were not higher, achieved in particular by measures to increase efficiency and lower costs", explained Mark Pace. The domestic market developed considerably more robustly than the export markets. Domestic sales in 2020 of 1.90 billion euros were about 7.3 percent below the comparable sales of the previous year. Slightly more than two thirds of the companies surveyed by the dental association recorded fewer domestic sales than in 2019. According to Chairman Mark Stephen Pace, it will take time for some companies to reach the level of 2019 again. A positive atmosphere meanwhile comes from the expectations the companies have for the current financial year and IDS year 2021. Fifty-one percent of the member companies forecast increases in turnover over the entire exhibition year and a further 42 percent a turnover at the level of the previous year. The results of the **VDDI economic barometer from spring**, which have just been evaluated, also confirm the positive estimates and expect-

*Mark Stephen Pace, Chairman of the board, Association of German Dental Manufacturers (VDDI), ©VDDI*

tations of German Dental Manufacturers for the current year 2021. With domestic turnover for the first half-year of 2021 almost 69 percent of those surveyed expect higher sales in comparison with the same period in the previous year. For export sales nearly 70 percent of the participants anticipate increases in turnover in this period. Mark Pace continues: "Not all regions will recover at the same pace, some economic regions are still occupied with overcoming the corona crisis. The health systems are under a high degree of pressure with the demands, but we can assume that in the medium-term the success of vaccinations will also lead to recoveries in these regions. The general health awareness and a need for health services resulting from this will increase."

The 39<sup>th</sup> IDS from 22-25.09.2021 will play an important role in the further progress of oral and dental health.

# IDS 2021: Driving Force of the Global Dental Industry

## High Number of Registrations From Home and Abroad

*Cologne, Germany, 20 May 2021* - Just over four months before the start of the International Dental Show 2021, the most important industry platform of the global dental industry in Cologne, and the preparations are in full swing. Whereby the leading international trade fair is taking on a very special responsibility this year and will sustainably underline its strong driving force for the participating industries. And with a new, hybrid trade fair format, IDS is proving to be the reliable compass for the safe navigation towards successful

business in the post-Corona era. This includes for instance the integration of IDScnect, a digital trade fair platform that enables a consistent, international reach and customer address and unites the key strengths of a physical trade fair with the forward-looking digital possibilities.

To-date around 850 companies from 57 countries have confirmed their participation at IDS 2021 - a remarkable intermediate result against the backdrop of the past months. In line with the pandemic-related framework conditions, IDS is

being staged in Halls 2, 3, 10 and 11. All halls are connected via a simple circular route that has been optimised for visitors. The four entrance areas of IDS 2021 - the South, East and West entrances and the entrance on the trade fair Boulevard - ensure that the visitors will be evenly distributed throughout the exhibition halls - in line with the current protection regulation. A Food Court Area will be installed alongside the existing food service and recreational areas to additionally ensure the visitors and exhibitors are safely provided with food services. The hall planning accommodates all necessary measures and official require-

**KÖLN · COLOGNE, 22. -25.09.2021**  
**HALLEPLAN · HALL PLAN**

[www.ids-cologne.de](http://www.ids-cologne.de)

In addition to the physical exhibition, IDS 2021 is also offering the exhibitors and visitors the digital platform, IDScconnect.

ments for the protection of exhibitors and visitors, which Koelnmesse has taken into account in its safety and hygiene concept #B-SAFE4business. For its events at the Cologne fair grounds, Koelnmesse will furthermore take all precautionary measures deemed relevant by the responsible health authorities in accordance with the Coronavirus Protection Ordinance. The necessity of these procedures will be reviewed continuously until the event and prepared accordingly. In addition to the physical exhibition, IDS 2021 is also offering the exhibitors and visitors the digital platform, IDScconnect. This hybrid approach enables visitors all over the globe, who are not able to travel to Cologne, to discover attractive trade fair profiles and products and con-

nect with contact partners via innovative channels. Because whether at a trade fair or during everyday business, the success of a company is based on three essential building blocks: inspiration, interaction and business. Where these crucial elements fall short, IDScconnect now offers additional opportunities. Extensive features make it possible to reach more potential customers easily, experience trends and presentations on demand and establish valuable contacts – from anywhere in the world. The digital platform of IDS is very easy and intuitive for everyone to use – even without previous digital experience – bringing the world’s largest dental show directly to your screen at home or office for an authentic trade fair experience.

**About IDS**

IDS (International Dental Show) takes place in Cologne every two years and is organised by the GFDI Gesellschaft zur Förderung der Dental-Industrie mbH, the commercial enterprise of the Association of German Dental Manufacturers (VDDI) and staged by Koelnmesse GmbH, Cologne.

**Your contact for IDS:**

Volker de Cloedt, Communications Manager  
 Koelnmesse GmbH  
 Messeplatz 1, 50679 Köln, Germany

**IDS - The definitive Date with Dental Destiny**

Once every 2 years, the dental world has a rendezvous in Cologne. Dentists, dental technicians and industry tradesmen come to be extensively informed about the latest innovations and cutting-edge developments which promote success on the world dental market. The IDS is the exceptional event where the dental trade and the public at large get a first-hand look at what is being introduced into the dental market. Lectures and seminars given by experts in their fields are also a hallmark of the IDS.

**The next IDS:**

- 39th International Dental Show - 22nd to 25th September 2021
- 40th International Dental Show - 14th to 18th March 2023

# SHOW REPORT

## Embracing innovative technologies and services at Dental South China 2021

The 26<sup>th</sup> Dental South China International Expo (DSC) was successfully concluded on 13 May 2021 in China Import and Export Fair Pazhou Complex in Guangzhou. With the steady improvement of Chinese epidemic prevention and control, DSC made good efforts to provide business opportunities, enrich exhibition activities and innovate services. Operated by Guangdong International Science & Technology Exhibition Company, DSC 2021 covered an exhibition area of 55,000 square meters, drew more than 850 exhibitors and around 60,000 visitors. More than 200 professional seminars were held during the exhibition.

### 850+ brand exhibitors brought new products and technologies

As a professional platform, DSC does well in business cooperation, product display, new product release, information sharing and technical exchanges. International exhibitors including Kavo, Dentsply Sirona, Straumann, Ivoclar Vivadent, A-dec, Carl Zeiss, Zimmer Biomet and local brands including Runyes, Upcera, AIDITE, Besmile, Ajax, Trausim showed their new products and excellent technologies during the exhibition. New Products Launch Event presented advanced digital products, medical equipment, and new technology, which caught an intense attention from the dental industry and provided one-stop experience for visitors.

### 200+ academic conferences promoted communication and exchange

As an annual event, DSC 2021 held 200 + seminars together with nearly 300 experts. High-end forums offered advanced technological achievements, leading trend of clinical

treatment techniques and efficient clinic management methods. "Symposium on Reviews on Typical Cases" allowed dentists to improve their diagnosis and treatment thinking in the collision of ideas. In addition, special training courses helped dentists gain clinical skills through theoretical and practical training.

Multiple activities and innovative digital services strengthened interaction with visitors. DSC conducted "dental industry job fair", gathering 62 dental schools, dental institutions and denture processing factories to provide a large number of high-quality jobs through online and offline recruitment. At the same time, a series of activities were organized to celebrate 5.12 International Nurses Day. As global trade

is still under great resistance, the new development pattern is taking shape. To this end, DSC focused on building "Wetchat E-Show", an online exhibition platform that introduced a more convenient communication mode. Furthermore, live streaming helped to break geographical and time barriers, connecting exhibitors and visitors at home and abroad.

### The 27th Dental South China International Expo will be held on 2-5 March 2022.

Sincerely looking forward to meeting you in 2022 and let's witness a more professional DSC expo!

 For 125 years, **Richmond Dental and Medical** has been manufacturing quality dental products. Headquartered in Charlotte, NC, we are vertically integrated with our cotton supplier. Our made in the USA, superior quality, braided cotton rolls are the most absorbent and do not stick to the mucosa. They may be used anytime a dry field or retraction is needed. In addition, Richmond's Braided Rolls can be used during fillings, crowns, sealants (on lingual side), occlusal adjustments, and root canals. Our 4" and 6" length braided rolls may be used for whitening and full arch reconstruction. Richmond's Wrapped Rolls wick moisture; do not stick to the tissue; and are manufactured in the USA from US grown, purified cotton. Our made in the USA, autoclavable, infection control dispensers are perfect for Richmond's 1.5" cotton rolls. Please visit our website **www.richmonddental.net** to learn more about our single use disposables and infection prevention dispensers.  
**fran.eskew@richmonddental.net**

Nicefeel®

### Premium Ozone Oral Irrigator for More Effective Oral Cleaning

Right now, we have a new type of oral irrigator with ozone function. It converts tap water into ozone, which effectively cleans bacteria in the mouth. The patented ozone generator can convert the H<sub>2</sub>O to O<sub>3</sub> water by changing its molecule structure. The new technology is an easier and more advanced way to safeguard your oral health. It has been clinically proven to kill most common bacteria quickly. From portable to tabletop products to meet your different needs, just one button, making your life better. Each one is simple to use and has several pressure ratings for your choice. We can also offer customized service if you want to add other accessories or promote your own brand.

# NON PROFIT Give Back a Smile

Every year, more than five million people are affected by domestic violence in the United States and Canada.

While great efforts have been made to raise awareness of this issue, little has been publicized concerning the dental problems victims may face. Victims may experience trauma to the jaw, including broken, chipped and knocked-out teeth. There is a significant need for programs like Give Back a Smile, whose member dentists are giving back by restoring the smiles of domestic abuse survivors.

Give Back a Smile is dedicated to helping victims of domestic violence reclaim their smiles, their self-esteem and their lives. The Give Back a Smile program is a charitable foundation of the American Academy of Cosmetic Dentistry, a prominent national dental association committed to the art and science of cosmetic dentistry. Through the American Academy of Cosmetic Dentistry Charitable Foundation (AACDCF), the Give Back a

Smile program is dedicated to providing cosmetic dental care at no cost to survivors of domestic violence by:

- Raising awareness
- Providing volunteer members of the AACD
- Giving survivors hope for a better tomorrow

Since its inception in 1999, over 900 dental treatment cases have been completed, resulting in over \$9 million dollars' worth of donated dental work. Today, over 350 patients are being treated through the program.

The American Academy of Cosmetic Dentistry's efforts to give back to the community has earned it worldwide recognition, including the 2001 Award of Excellence from the prestigious Associations Advance America Summit Awards, which recognizes excellence in charitable organizations.

### The Whitening Fundraiser

You don't have to be a cosmetic dentist to parti-

cipate in Give Back a Smile. The recent establishment of the Give Back a Smile Whitening Program allows everyone to give back and help heal the effects of domestic violence while whitening their smiles.

Discus Dental, Inc., the makers of the Zoom!® teeth whitening system, have agreed to donate whitening kits to volunteer dentists. Profits from the purchase of these dental products will be donated to the AACD Charitable Foundation.

For a list of participating providers, contact the American Academy of Cosmetic Dentistry.

### Eligibility

Both men and women who have received injuries from a former partner or spouse are eligible for the Give Back a Smile program. Give Back a Smile is only responsible for correcting injuries to teeth in the smile-zone as a result of domestic violence. A volunteer dentist will perform an exam to finalize entry into the program and rule out other causes, such as previous neglect.

To meet the Give Back a Smile program's requ-

irements, individuals must have been out of an abusive relationship for at least a year. Survivors are required to provide proof of domestic abuse, such as a signature from a counselor, social worker or case manager.

Potential patients must fill out an application and undergo an interview process prior to being matched with a participating dentist who will

There is a significant need for programs like Give Back a Smile, whose member dentists are giving back by restoring the smiles of domestic abuse survivors.

make the final decision on the applicant's acceptance into the program.

**Contact Information**

If you or someone you know is a domestic abuse survivor in need of dental care, you can contact Give Back a Smile for help.

You may apply online at [www.givebackasmile.com](http://www.givebackasmile.com) or call their hotline at (800) 773 4227 or send an e-mail to [givebackasmile@aacd.com](mailto:givebackasmile@aacd.com).

Donations can be made to the AACD Charitable Foundation at the address listed below. There is a waiting list of applicants in some areas and volunteers are needed to help.

The AACDCF needs dentists, laboratory technicians and other dental professionals to donate time and services to survivors of domestic abuse.

The Give Back a Smile program is a charitable foundation of the American Academy of Cosmetic Dentistry, a prominent national dental association committed to the art and science of cosmetic dentistry.

If you're interested in giving back to your community, consider participating in the Give Back a Smile program.

**For further information on the Give Back a Smile program, please contact the American Academy of Cosmetic Dentistry.**

## NON PROFIT

# Chiara, Step by Step From Mlali, Tanzania

## Hatua kwa hatua, step by step...

*One Month in the Center for Disabled Children in Mlali*

Curiosity.

A desire to live a different reality from what I am used to. A desire to search for new worlds and understand what is the path that the Lord has thought for me. I believe these are the main reasons that led me in October 2019, to Mlali Kituo, in the heart of Tanzania, as a guest of the Cappuccini friars.

A reality that welcomes children with severe physical and mental disabilities, whose families do not have the possibilities to take care of them. During my stay, I worked with the volunteers of the center, who look after these children every day, by feeding and washing them, by giving them physiotherapy, or simply by playing with them.

For the first time in my life, I found myself facing disability, the impact was really strong, especially considering the lightheartedness I started with. Gestures that were usual for the volunteers and that they performed with great naturalness, seemed forced to me: at first nothing I did seemed right. What really surprised me the most was realizing that those same children that I was supposed to take care of, were taking care of me.

They took me by the hand, accompanying me in this adventure, always making me feel loved, laughing at my little mistakes and rejoicing with me, until, day after day, I managed to fit into their everyday life. Without knowing how to speak, they taught me to use new words. Without knowing how to walk, they taught me that sometimes, to remain standing up, you just need to put one foot in front of the

other, without being afraid of falling. Because the Mlali Kituo children are never afraid.

### About Smile Mission ONLUS

Smile Mission is an independent association founded in 2005 for the promotion of oral health in disadvantaged communities and in developing countries. Smile Mission operates with the contribution of volunteers and supporters, in collaboration with other national and international associations.

We strive to provide accessible healthcare also for emarginated people. Pathologies of the oral cavity are a fundamental determinant in the quality of life of an individual.
